Test Description	Value(s)	Unit(s)	Reference Range
------------------	----------	---------	-----------------

Allergy Comprehensive Plus - Food, Inhalant & Skin Allergens (107 Allergens)

Result	REPORT ATTACHED
--------	-----------------

Note:- The sample method for the sample is Line immunoassay (LIA)

Interpretation:

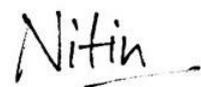

Note:
The total and specific IgE levels tested on different platforms may not be similar owing to difference in sensitivity and specificity of each test. In conditions where results are not correlating with the clinical history, testing with gold standard technique is recommended.

- The panel includes quantitative determination of only common allergens among the wide number of allergens present.
- Certain allergen are performed in mix (as mentioned in the report). In vitro test performed on serum sample, provides relevant information to diagnose allergy, help in treatment and predict disease progression.
- Among the food allergens, specific IgE levels may not be detectable inspite of presence of evident clinical allergy. This is noticed as the allergen in food is modified during food preparation, cooking or processing and thus do not exist in the original form for which the patient's sample is tested.
- Cross-reactive carbohydrate determinants (CCDs) in the serum of persons with pollen allergy are responsible for cross reactivity with several inhalant and food allergens with of little or no clinical relevance. Clinical correlation is advisable in class 0 and class 1 IgE antibodies detection.
- Normal IgE levels do not necessarily exclude the possibility of allergy because certain allergies can be non-IgE mediated.
- The results should be evaluated in relation to individual's clinical history.

Allergen Specific IgE Interpretation

QUANTITATIVE RESULT IN IU/ml	CLASS	ALLERGEN SPECIFIC ANTIBODY LEVEL	SYMPTOM RELATION
0.00- 0.34	0	Undetectable	Unlikely
0.35- 0.69	1	Weak	Uncommon
0.70- 3.49	2	Moderate	Low
3.50- 17.49	3	Moderate Strong	Common
17.50- 49.99	4	Strong	High
50.00- 99.99	5	Very Strong	Very High
>100.00	6	Extremely Strong	Very High

RANGE OF INTERPRETATION

IU/mL	Class	Description
≤ 0.34	0	Not found
0.35 - 0.69	1	Weak
0.70 - 3.49	2	Moderate
3.50 - 17.49	3	Moderately strong
17.50 - 49.99	4	Strong
50.00 - 99.99	5	Very strong
≥ 100.00	6	Extremely strong

Remark

Terms and Conditions of Reporting

1. The presented findings in the Reports are intended solely for informational and interpretational purposes by the referring physician or other qualified medical professionals possessing a comprehensive understanding of reporting units, reference ranges, and technological limitations. The laboratory shall not be held liable for any interpretation or misinterpretation of the results, nor for any consequential or incidental damages arising from such interpretation.
2. It is to be presumed that the tests performed pertain to the specimen/sample attributed to the Customer's name or identification. It is presumed that the verification particulars have been cleared out by the customer or his/her representation at the point of generation of said specimen / sample. It is hereby clarified that the reports furnished are restricted solely to the given specimen only.
3. It is to be noted that variations in results may occur between different laboratories and over time, even for the same parameter for the same Customer. The assays are performed and conducted in accordance with standard procedures, and the reported outcomes are contingent on the specific individual assay methods and equipment(s) used, as well as the quality of the received specimen.
4. This report shall not be deemed valid or admissible for any medico-legal purposes.
5. The Customers assume full responsibility for apprising the Company of any factors that may impact the test finding. These factors, among others, includes dietary intake, alcohol, or medication / drug(s) consumption, or fasting. This list of factors is only representative and not exhaustive.
