

Patient Name : Mr MR.DUMMY	Sample Collected : Apr 26, 2024, 01:00 PM
DOB/Age/Gender : 23 Y/Male	Report Date : May 25, 2024, 02:47 PM.
Patient ID / UHID : 8052241/RCL7248922	Barcode No : SI485299
Referred By : Dr. X	Report Status : Final Report
Sample Type : Serum	

Test Description	Value(s)	Unit(s)	Reference Range
------------------	----------	---------	-----------------

Chlamydia Trachomatis IgM Antibodies

Chlamydia Trachomatis-IgM (Serum, EIA)	5.7	U/ml	Negative: < 9.0 Equivocal: 9.0 - 11.0 Positive: > 11.0
---	-----	------	--

Interpretation:
 Chlamydia trachomatis is one of the most common sexually transmitted prokaryotic pathogens. The bacterium infects epithelia cells of the urogenital and respiratory tracts as well as cells of the conjunctiva. Chlamydia trachomatis infections may be asymptomatic in both females and males. Untreated infections can result in serious damage and complications. The serovars A to C cause ceratoconjunctivitis. Chronic infections during childhood can result in trachoma or blindness. Serovars D to K are pathogens of the urogenital tract responsible for urethritis, proctitis, and cervicitis. Salpingitis, endometritis, and perihepatitis are frequently the consequence of untreated cervicitis. Occasionally, fallopian tube obstructions and ectopic pregnancy, which are some of the most common reasons for infertility in women, may result. Furthermore, the risk of a premature delivery for infected pregnant women is also increased. The risk of transfer to the newborn during parturition is ~60%, with conjunctivitis or pneumonia as possible sequelae. In addition to urethritis, proctitis, epidymitis, and prostatitis, which may lead to infertility, are possible consequences for men.
