**BIOCHEMISTRY REPORT**

**Transferrin**

TRANSFERRIN, SERUM	<b>181.3</b>	mg/dL	203.00 - 360.00
Method : Immunoturbidimetry			

**Interpretation:**

**Note:** Pregnancy and use of oral contraceptive cause increase in transferrin levels.

**Comments**

Transferrin is a transport protein which transfers ferric iron from iron stores to bone marrow. In response to short term iron deficiency, transferrin levels rise markedly to twice the normal levels or higher. An elevated level on electrophoresis can have the appearance of a paraprotein in cases of severe iron deficiency. Administration of iron to deficient patients increases the saturation followed by return of transferrin to normal level. Chronic saturation of transferrin occurs in Idiopathic hemochromatosis and Transfusional hemosiderosis. In severe cases of Protein losing nephropathy, transferrin is lost from the circulation in the urine carrying iron with it, thus leading to Hypochromic anemia. Simultaneous measurement of transferrin with ferritin helps to differentiate anemia due to iron deficiency and chronic inflammation.

Booking Centre :- WALK-IN REDCLIFFE LABS- AGARTALA, Redcliffe Labs Walk-in (Agartala)

Processing Lab :- Redcliffe Lifetech Pvt. Ltd., C/O Medicaids Pathological Lab & X-Ray Clinic, 6 IGM Hospital Lane Rabindra Palli Agartala - 799001

# Terms and Conditions of Reporting

1. The presented findings in the Reports are intended solely for informational and interpretational purposes by the referring physician or other qualified medical professionals possessing a comprehensive understanding of reporting units, reference ranges, and technological limitations. The laboratory shall not be held liable for any interpretation or misinterpretation of the results, nor for any consequential or incidental damages arising from such interpretation.
2. It is to be presumed that the tests performed pertain to the specimen/sample attributed to the Customer's name or identification. It is presumed that the verification particulars have been cleared out by the customer or his/her representation at the point of generation of said specimen / sample. It is hereby clarified that the reports furnished are restricted solely to the given specimen only.
3. It is to be noted that variations in results may occur between different laboratories and over time, even for the same parameter for the same Customer. The assays are performed and conducted in accordance with standard procedures, and the reported outcomes are contingent on the specific individual assay methods and equipment(s) used, as well as the quality of the received specimen.
4. This report shall not be deemed valid or admissible for any medico-legal purposes.
5. The Customers assume full responsibility for apprising the Company of any factors that may impact the test finding. These factors, among others, includes dietary intake, alcohol, or medication / drug(s) consumption, or fasting. This list of factors is only representative and not exhaustive.
