

Patient Name : Mr MR.DUMMY

DOB/Age/Gender : 23 Y/Male

Patient ID / UHID : 8052636/RCL7249222

Referred By : Dr. Dr. X

Sample Type : Serum

Sample Collected : Apr 26, 2024, 01:00 PM.

Report Date : May 25, 2024, 12:47 PM.

Barcode No : SI484763

Report Status : Final Report

Allergy Panel- Inhalation (20 Allergen)

Name Of Allergen	Value(s)	Unit(s)	Ref Range
Aspergillus fumigatus	<0.35	kU/l	<0.35
Carnation flower	<0.35	kU/l	<0.35
Cat	<0.35	kU/l	<0.35
Cockroach	<0.35	kU/l	<0.35
Chicken feathers	<0.35	kU/l	<0.35
Cotton (treated)	<0.35	kU/l	<0.35
Cultivated Corn	<0.35	kU/l	<0.35
Cultivated rye	<0.35	kU/l	<0.35
Dermatophagoides farinae	<0.35	kU/l	<0.35
Dog	<0.35	kU/l	<0.35
Eucalyptus	<0.35	kU/l	<0.35
False ragweed	<0.35	kU/l	<0.35
House dust mite mix	<0.35	kU/l	<0.35
Jute	<0.35	kU/l	<0.35
Pigeon feathers	<0.35	kU/l	<0.35
Sheep's wool	<0.35	kU/l	<0.35
Straw Dust	<0.35	kU/l	<0.35
Sunflower	<0.35	kU/l	<0.35
Timothy grass	<0.35	kU/l	<0.35
Trichophyton mentagrophytes	<0.35	kU/l	<0.35

CLASS	CONCENTRATION kU/l	RESULT
0	<0.35	No specific antibodies
1	0.35 to <0.7	Very low antibody titre, frequently no clinical symptoms with an existing sensitization.
2	0.7 to <3.5	Low antibody titre, existing sensitization, often with clinical symptoms in the upper range of class.
3	3.5 to <17.5	Significant antibody titre, clinical symptoms usually present.
4	17.5 to <50.0	High antibody titre, almost always with clinical symptoms.
5	50.0 to <100.0	Very high antibody titre
6	≥ 100.0	Very high antibody titre

Note

- In vitro allergy tests are a valuable tool for the clinician to diagnose allergy, treat and predict disease development.
- Dust allergen specific IgE includes only common causative allergens and does not include all possible allergens.
- House dust mite mix includes Dermatophagoides pteronyssinus & Dermatophagoides farinae.
- Normal IgE levels do not necessarily exclude the possibility of allergy because certain allergies can be non-IgE mediated or samples are taken before the organism was able to produce antibodies against the antigen or test conducted after a long time of sensitization, hence IgE levels may be normal.
- All results should be interpreted in relation to the individual case history.

Comment :

Dust allergens are commonly inhalant leading to atopic reactions. Allergy to inhalant allergens is rare in the first year of age, uncommon until the age of three and successively becomes dominant at school age. These inhalant allergies show increasing sensitivity with advancing age. The common symptoms of dust allergy are wheezing, mucosal congestion, nasal obstruction and mouth breathing leading to Allergic rhinitis, Asthma etc. Cockroaches produce potent allergens which are found in maximum concentration in the kitchen. Lower levels of allergens are found in bedding, bedroom floor and sofa dust leading to symptoms in sensitized individuals. Mites like Dermatophagoides pteronyssinus / farinae are one of the most common causes of symptoms such as perennial type Asthma, Rhinitis & Conjunctivitis often with nocturnal or early morning episodes. IgE mediated Allergic rhinitis is due to the heritable atopic state as well as development of sensitivity to allergens present in the environment. It may be Seasonal (intermittent) caused due to grass, tree & weed pollens and outdoor molds or Perennial (persistent) caused by pets, housedust mites, indoor molds and cockroaches.

Terms and Conditions of Reporting

1. The presented findings in the Reports are intended solely for informational and interpretational purposes by the referring physician or other qualified medical professionals possessing a comprehensive understanding of reporting units, reference ranges, and technological limitations. The laboratory shall not be held liable for any interpretation or misinterpretation of the results, nor for any consequential or incidental damages arising from such interpretation.
2. It is to be presumed that the tests performed pertain to the specimen/sample attributed to the Customer's name or identification. It is presumed that the verification particulars have been cleared out by the customer or his/her representation at the point of generation of said specimen / sample. It is hereby clarified that the reports furnished are restricted solely to the given specimen only.
3. It is to be noted that variations in results may occur between different laboratories and over time, even for the same parameter for the same Customer. The assays are performed and conducted in accordance with standard procedures, and the reported outcomes are contingent on the specific individual assay methods and equipment(s) used, as well as the quality of the received specimen.
4. This report shall not be deemed valid or admissible for any medico-legal purposes.
5. The Customers assume full responsibility for apprising the Company of any factors that may impact the test finding. These factors, among others, includes dietary intake, alcohol, or medication / drug(s) consumption, or fasting. This list of factors is only representative and not exhaustive.

DISCLAIMER

This is a sample report provided for demonstration purposes only and does not represent an actual patient report. Test results, reference ranges, methodologies, instrumentation, and report formats may vary depending on the laboratory performing the test. The format and representation shown are indicative of reports generated by the National Reference Laboratory of Redcliffe Labs, Noida. This sample report should not be used for medical interpretation, diagnosis, or treatment decisions.
