Prepared For

Mr MR.DUMMY

M 23

Name
Mr MR.DUMMY

Patient ID
8052642

Gender
M

Age
23

Health Summary

BLOOD COUNTS

Everything looks good

THYROID PROFILE

Everything looks good

LIPID PROFILE

| Test Name | Result |
|-------------------|--------|
| Total Cholesterol | 200 |
| Please Watchout | |

DIABETES MONITORING

| Test Name | Result |
|---------------------------------|--------|
| Glycosylated Hemoglobin (HbA1c) | 5.7 |
| Please Watchout | |

KIDNEY PROFILE

Everything looks good

LIVER PROFILE

Everything looks good

ANEMIA STUDIES

| Test Name | Result |
|-----------------|--------|
| Hemoglobin | 10.8 |
| Please Watchout | |

VITAMIN PROFILE

Everything looks good

MINERAL PROFILE

Everything looks good

| Patient Name | : Mr MR.DUMMY | | |
|-------------------|----------------------|------------------|---------------------------|
| DOB/Age/Gender | : 23 Y/Male | Sample Collected | : Apr 26, 2024, 01:00 PM |
| Patient ID / UHID | : 8052642/RCL7249256 | Report Date | : May 24, 2024, 10:13 AM. |
| Referred By | : Dr. Dr. X | Barcode No | : HY586298 |
| Sample Type | : Whole blood EDTA | Report Status | : Final Report |
| Test Description | Value(s) | Unit(s) | Reference Range |

Advance Full Body Checkup with Covid Antibody

Complete Blood Count (CBC)

| RBC Parameters | | | |
|---|------|---------------------|-------------|
| Hemoglobin <i>Spectrophotometry</i> | 10.8 | g/dL | 13.0 - 17.0 |
| RBC Count <i>Electrical impedance</i> | 3.8 | 10 ⁶ /μl | 4.5 - 5.5 |
| PCV <i>Calculated</i> | 35.1 | % | 40 - 50 |
| MCV <i>Calculated</i> | 91.8 | fl | 83 - 101 |
| MCH <i>Calculated</i> | 28.3 | pg | 27 - 32 |
| MCHC <i>Calculated</i> | 30.9 | g/dL | 31.5 - 34.5 |
| RDW (CV) <i>Calculated</i> | 16 | % | 11.6 - 14.0 |
| RDW-SD <i>Calculated</i> | 42.4 | fl | 35.1 - 43.9 |
| WBC Parameters | | | |
| TLC <i>Electrical impedance and microscopy</i> | 7.9 | 10 ³ /μl | 4 - 10 |
| Differential Leucocyte Count | | | |
| Neutrophils <i>Flow-cytometry DHSS</i> | 66.2 | % | 40-80 |
| Lymphocytes <i>Flow-cytometry DHSS</i> | 23.7 | % | 20-40 |
| Monocytes <i>Flow-cytometry DHSS</i> | 8.9 | % | 2-10 |
| Eosinophils <i>Flow-cytometry DHSS</i> | 1 | % | 1-6 |
| Basophils <i>Flow-cytometry DHSS</i> | 0.2 | % | <2 |
| Absolute Leukocyte Counts <i>Calculated</i> | | | |
| Neutrophils. | 5.23 | 10 ³ /μl | 2 - 7 |
| Lymphocytes. <i>Calculated</i> | 1.87 | 10 ³ /μl | 1 - 3 |
| Monocytes. <i>Calculated</i> | 0.7 | 10 ³ /μl | 0.2 - 1.0 |
| Eosinophils. <i>Calculated</i> | 0.08 | 10 ³ /μl | 0.02 - 0.5 |
| Basophils. | 0.02 | 10 ³ /μl | 0.02 - 0.5 |

| | | | |
|-------------------|----------------------|------------------|---------------------------|
| Patient Name | : Mr MR.DUMMY | Sample Collected | : Apr 26, 2024, 01:00 PM |
| DOB/Age/Gender | : 23 Y/Male | Report Date | : May 24, 2024, 10:13 AM. |
| Patient ID / UHID | : 8052642/RCL7249256 | Barcode No | : HY586298 |
| Referred By | : Dr. Dr. X | Report Status | : Final Report |
| Sample Type | : Whole blood EDTA | | |

| Test Description | Value(s) | Unit(s) | Reference Range |
|--|-------------|---------------------|-----------------|
| <i>Calculated</i> | | | |
| Platelet Parameters | | | |
| Platelet Count <i>Electrical impedance and microscopy</i> | 155 | 10 ³ /μl | 150 - 410 |
| Mean Platelet Volume (MPV) <i>Calculated</i> | 14.6 | fL | 9.3 - 12.1 |
| PCT <i>Calculated</i> | 0.2 | % | 0.17 - 0.32 |
| PDW <i>Calculated</i> | 34.1 | fL | 8.3 - 25.0 |
| P-LCR <i>Calculated</i> | 71 | % | 18 - 50 |
| P-LCC <i>Calculated</i> | 82 | % | 44 - 140 |
| Mentzer Index <i>Calculated</i> | 24.16 | % | > 13 |

Interpretation:

CBC provides information about red cells, white cells and platelets. Results are useful in the diagnosis of anemia, infections, leukemias, clotting disorders and many other medical conditions.

Erythrocyte Sedimentation Rate (ESR)

| | | | |
|---|---|-------|--------|
| ESR - Erythrocyte Sedimentation Rate MODIFIED WESTERGREN | 6 | mm/hr | 0 - 10 |
|---|---|-------|--------|

Interpretation:

ESR is also known as Erythrocyte Sedimentation Rate. An ESR test is used to assess inflammation in the body. Many conditions can cause an abnormal ESR, so an ESR test is typically used with other tests to diagnose and monitor different diseases. An elevated ESR may occur in inflammatory conditions including infection, rheumatoid arthritis, systemic vasculitis, anemia, multiple myeloma, etc. Low levels are typically seen in congestive heart failure, polycythemia, sickle cell anemia, hypo fibrinogenemia, etc.

| Patient ID / UHID : 8052642/RCL7249256 | Barcode No : HY586298 |
| Referred By : Dr. Dr. X | Report Status : Final Report |
| Sample Type : Whole blood EDTA | |

| Test Description | Value(s) | Unit(s) | Reference Range |
|------------------|----------|---------|-----------------|
|------------------|----------|---------|-----------------|

HbA1C (Glycosylated Haemoglobin)

| | | | |
|--|--------|-------|-------------------|
| Glycosylated Hemoglobin (HbA1c) <i>HPLC</i> | 5.7 | % | < 5.7 |
| Estimated Average Glucose | 116.89 | mg/dL | Refer Table Below |

Interpretation:

Interpretation For HbA1c% As per American Diabetes Association (ADA)

| Reference Group | HbA1c in % |
|--|---|
| Non diabetic adults >=18 years | <5.7 |
| At risk (Prediabetes) | 5.7 - 6.4 |
| Diagnosing Diabetes | >= 6.5 |
| Therapeutic goals for glycemic control | Age > 19 years Goal of therapy: < 7.0 Age < 19 years Goal of therapy: <7.5 |

Note:

1. Since HbA1c reflects long term fluctuations in the blood glucose concentration, a diabetic patient who is recently under good control may still have a high concentration of HbA1c. Converse is true for a diabetic previously under good control but now poorly controlled. 2. Target goals of < 7.0 % may be beneficial in patients with short duration of diabetes, long life expectancy and no significant cardiovascular disease. In patients with significant complications of diabetes, limited life expectancy or extensive co-morbid conditions, targeting a goal of < 7.0 % may not be appropriate

Comments :

HbA1c provides an index of average blood glucose levels over the past 8 - 12 weeks and is a much better indicator of long term glycemic control as compared to blood and urinary glucose determinations ADA criteria for correlation between HbA1c & Mean plasma glucose levels.

| HbA1c(%) | Mean Plasma Glucose (mg/dL) | HbA1c(%) | Mean Plasma Glucose (mg/dL) |
|----------|-----------------------------|----------|-----------------------------|
| 6 | 126 | 12 | 298 |
| 8 | 183 | 14 | 355 |
| 10 | 240 | 16 | 413 |

| DOB/Age/Gender : 23 Y/Male | Report Date : May 08, 2024, 11:47 AM. |
| Patient ID / UHID : 8052642/RCL7249256 | Barcode No : ZC665673 |
| Referred By : Dr. Dr. X | Report Status : Final Report |
| Sample Type : FLUORIDE F | |

| Test Description | Value(s) | Unit(s) | Reference Range |
|------------------|----------|---------|-----------------|
|------------------|----------|---------|-----------------|

Glucose Fasting (BSF)

| | | | |
|--------------------------------------|-------|-------|------|
| Glucose Fasting <i>Hexokinase</i> | 91.90 | mg/dL | <100 |
|--------------------------------------|-------|-------|------|

Interpretation:

| Status | Fasting plasma glucose in mg/dL |
|--------------------------|---------------------------------|
| Normal | <100 |
| Impaired fasting glucose | 100 - 125 |
| Diabetes | ≥126 |

Reference : American Diabetes Association

Comment :

Blood glucose determinations are commonly used as an aid in the diagnosis and treatment of diabetes. Elevated glucose levels (hyperglycemia) may also occur with pancreatic neoplasm, hyperthyroidism, and adrenal cortical hyper function as well as other disorders. Decreased glucose levels (hypoglycemia) may result from excessive insulin therapy, insulinoma, or various liver diseases.

Note

- The diagnosis of Diabetes requires a fasting plasma glucose of $>$ or $=$ 126 mg/dL or a random / 2 hour plasma glucose value of $>$ or $=$ 200 mg/dL with symptoms of diabetes mellitus.
- Very high glucose levels ($>$ 450 mg/dL in adults) may result in Diabetic Ketoacidosis.

Liver Function Test (LFT)

| | | | |
|--|-------|-------|-----------|
| Bilirubin Total <i>Diazonium Salt</i> | 0.54 | mg/dL | 0.2 - 1.2 |
| Bilirubin Direct <i>Diazo Reaction</i> | 0.12 | mg/dL | 0.0 - 0.5 |
| Bilirubin Indirect <i>Calculation (T Bil - D Bil)</i> | 0.42 | mg/dL | 0.1 - 1.0 |
| SGOT/AST <i>NADH (without P-5-P)</i> | 34.0 | U/L | 11 - 34 |
| SGPT/ALT <i>NADH (without P-5-P)</i> | 4.2 | U/L | < 45 |
| SGOT/SGPT Ratio | 8.1 | % | - |
| Alkaline Phosphatase <i>Para-nitrophenyl phosphate (p-NPP)</i> | 102.0 | U/L | 50 – 116 |
| Total Protein <i>Biuret</i> | 8.0 | g/dL | 6.4 - 8.3 |
| Albumin <i>Colorimetric BCG</i> | 4.9 | g/dL | 3.5 - 5.2 |
| Globulin <i>Calculation (T.P - Albumin)</i> | 3.1 | g/dL | 2.3 - 3.5 |
| Albumin :Globulin Ratio <i>Calculation (Albumin/Globulin)</i> | 1.58 | - | 1.3 - 2.1 |
| Gamma Glutamyl Transferase (GGT) <i>L-gamma-glutamyl-3-carboxy-4-nitroanilide substra</i> | 12.0 | U/L | < 55 |

Interpretation:

The liver filters and processes blood as it circulates through the body. It metabolizes nutrients, detoxifies harmful substances, makes blood clotting proteins, and performs many other vital functions. The cells in the liver contain proteins called enzymes that drive these chemical reactions. When liver cells are damaged or destroyed, the enzymes in the cells leak out into the blood, where they can be measured by blood tests. Liver tests check the blood for two main liver enzymes. Aspartate aminotransferase (AST), SGOT: The AST enzyme is also found in muscles and many other tissues besides the liver. Alanine aminotransferase (ALT), SGPT: ALT is almost exclusively found in the liver. If ALT and AST are found together in elevated amounts in the blood, liver damage is most likely present. Alkaline Phosphatase and GGT: Another of the liver's key functions is the production of bile, which helps digest fat. Bile flows through the liver in a system of small tubes (ducts), and is eventually stored in the gallbladder, under the liver. When bile flow is slow or blocked, blood levels of certain liver enzymes rise: Alkaline phosphatase Gamma-utanyl transpeptidase (GGT) Liver tests may check for any or all of these enzymes in the blood. Alkaline phosphatase is by far the most commonly tested of the three. If alkaline phosphatase and GGT are elevated, a problem with bile flow is most likely present. Bile flow problems can be due to a problem in the liver, the gallbladder, or the tubes connecting them. Proteins are important building blocks of all cells and tissues. Proteins are necessary for your body's growth, development, and health. Blood contains two classes of protein, albumin and globulin. Albumin proteins keep fluid from leaking out of blood vessels. Globulin proteins play an important role in your immune system. Low total protein may

Indicate:

1. Bleeding
2. Liver disorder
3. Malnutrition
4. Agammaglobulinemia High Protein levels 'Hyperproteinemia: May be seen in dehydration due to inadequate water intake or to excessive water loss (eg, severe vomiting, diarrhea, Addison's disease and diabetic acidosis) or as a result of increased production of proteins Low albumin levels may be

| Potassium <i>ISE-Indirect</i> | 4.6 | mmol/L | 3.5 - 5.1 |
| Chloride <i>ISE-Indirect</i> | 102.0 | mmol/L | 98 - 107 |

Interpretation:

Kidney function tests is a collective term for a variety of individual tests and procedures that can be done to evaluate how well the kidneys are functioning. Many conditions can affect the ability of the kidneys to carry out their vital functions. Some lead to a rapid (acute) decline in kidney function others lead to a gradual (chronic) decline in function. Both result in a buildup of toxic waste substance on urine samples, as well as on blood samples. A number of symptoms may indicate a problem with your kidneys. These include : high blood pressure, blood in urine frequent urges to urinate, difficulty beginning urination, painful urination, swelling in the hands and feet due to a buildup of fluids in the body. A single symptom may not mean something serious. However, when occurring simultaneously, these symptoms suggest that your kidneys are not working properly. Kidney function tests can help determine the reason. Electrolytes (sodium, potassium, and chloride) are present in the human body and the balancing act of the electrolytes in our bodies is essential for normal function of our cells and organs. There has to be a balance. Ionized calcium this test if you have signs of kidney or parathyroid disease. The test may also be done to monitor progress and treatment of these diseases.

| Test Description | Value(s) | Unit(s) | Reference Range |
|------------------|----------|---------|-----------------|
|------------------|----------|---------|-----------------|

Lipid Profile

| | | | |
|--|------|-------|------|
| Total Cholesterol <i>CHOD-PAP</i> | 200 | mg/dL | <200 |
| Triglycerides <i>Enzymatic colorimetric</i> | 100 | mg/dL | <150 |
| HDL Cholesterol <i>CHOD-POD</i> | 70 | mg/dL | > 40 |
| Non HDL Cholesterol <i>Calculated</i> | 130 | mg/dL | <130 |
| LDL Cholesterol <i>Calculated</i> | 110 | mg/dL | <100 |
| V.L.D.L Cholesterol <i>Calculated</i> | 20 | mg/dL | < 30 |
| Chol/HDL Ratio <i>Calculated</i> | 2.86 | Ratio | - |
| HDL/ LDL Ratio <i>Calculated</i> | 0.64 | Ratio | - |
| LDL/HDL Ratio <i>Calculated</i> | 1.57 | Ratio | - |

Interpretation:

Lipid level assessments must be made following 9 to 12 hours of fasting, otherwise assay results might lead to erroneous interpretation. NCEP recommends of 3 different samples to be drawn at intervals of 1 week for harmonizing biological variables that might be encountered in single assays.

| National Lipid Association Recommendations (NLA-2014) | Total Cholesterol (mg/dL) | Triglyceride (mg/dL) | LDL Cholesterol (mg/dL) | Non HDL Cholesterol (mg/dL) |
|---|---------------------------|----------------------|-------------------------|-----------------------------|

| Patient Name : Mr MR.DUMMY | Sample Collected : Apr 26, 2024, 01:00 PM |
| DOB/Age/Gender : 23 Y/Male | Report Date : May 08, 2024, 12:00 PM. |
| Patient ID / UHID : 8052642/RCL7249256 | Barcode No : ZC665674 |
| Referred By : Dr. Dr. X | Report Status : Final Report |
| Sample Type : Serum | |

| Test Description | Value(s) | Unit(s) | Reference Range |
|------------------|----------|---------|-----------------|
|------------------|----------|---------|-----------------|

Iron Studies

| | | | |
|---|-------|-------|-----------|
| Iron <i>FerroZine</i> | 98.0 | µg/dL | 33 - 193 |
| TIBC,(Total Iron Binding Capacity) <i>Calculated</i> | 376.4 | µg/dL | 228 - 428 |
| UIBC <i>FerroZine</i> | 278.4 | µg/dL | 125 - 345 |
| Transferrin Saturation <i>Calculated</i> | 26.04 | % | 16 - 45 |

Interpretation:

Increased levels due to iron ingestion or ineffective erythropoiesis. Decreased levels due to infection, inflammation, malignancy, menstruation and Fe deficiency. Needs to be taken into consideration with TIBC. Transferrin Saturation:- Low level Transferrin Saturation can indicate iron deficiency, erythropoiesis, infection, or inflammation. High level Transferrin Saturation can indicate recent ingestion of dietary iron, ineffective erythropoiesis, haemochromatosis or liver disease. High TIBC, UIBC, or transferrin usually indicates iron deficiency, but they are also increased in pregnancy and with the use of oral contraceptives. Low TIBC, UIBC, or transferrin may occur if someone has: Hemochromatosis, Certain types of anemia due to accumulated iron, Malnutrition, kidney disease that causes a loss of protein in urine.

Vitamin B12 / Cyanocobalamin

| | | | |
|-----------------------|-------|-------|-----------|
| Vitamin - B12 CMIA | 489.0 | pg/mL | 187 - 883 |
|-----------------------|-------|-------|-----------|

Interpretation:
 Low Values are a sign of a vitamin B12 deficiency. People with this deficiency are likely to have or develop symptoms. Causes of vitamin B12 deficiency include: Not enough vitamin B12 in diet (rare except with a strict vegetarian diet), Diseases that cause malabsorption (for example, celiac disease and Crohn's disease), Lack of intrinsic factor, Above normal heat production (for example, with hyperthyroidism), Pregnancy. Increased vitamin B12 levels are uncommon. Usually excess vitamin B12 is removed in the urine. Conditions that can increase B12 levels include: Liver disease (such as cirrhosis or hepatitis), Myeloproliferative disorders (for example, polycythemia vera and chronic myelocytic leukemia).

Vitamin B12: Low Levels can cause malabsorption, Lack of intrinsic factor, Above normal heat production (for example, with hyperthyroidism), Pregnancy. High Level Liver disease, Myeloproliferative disorders (for example, polycythemia vera and chronic myelocytic leukemia).

1. Out of 140 healthy indian population, 91% of Vitamin B 12 concentrations was at lower level: 59.00 pg/ml and upper level: 700.00 pg/ml

"Patients on Biotin supplement may have interference in some immunoassays. Ref: Arch Pathol Lab Med—Vol 141, November 2017. With individuals taking high dose Biotin (more than 5 mg per day) supplements, at least 8-hour wait time before blood draw is recommended."

|------------------|----------|---------|-----------------|

Vitamin D 25 Hydroxy

| | | | |
|--------------------------------------|------|-------|--|
| Vitamin D 25 - Hydroxy <i>CMA</i> | 48.0 | ng/mL | Deficient <20 Insufficient 21 - 29 Sufficient 30 - 100 |
|--------------------------------------|------|-------|--|

Interpretation:

25-Hydroxy vitamin D represents the main body reservoir and transport form. Mild to moderate deficiency is associated with Osteoporosis / Secondary Hyperparathyroidism while severe deficiency causes Rickets in children and Osteomalacia in adults. Prevalence of Vitamin D deficiency is approximately >50% specially in the elderly. This assay is useful for diagnosis of vitamin D deficiency and Hypervitaminosis D. It is also used for differential diagnosis of causes of Rickets & Osteomalacia and for monitoring Vitamin D replacement therapy.

|------------------|----------|---------|-----------------|
|------------------|----------|---------|-----------------|

Thyroid Profile Total

| | | | |
|--|------|--------|--------------|
| Triiodothyronine (T3) CMIA | 89.0 | ng/dL | 35 - 193 |
| Total Thyroxine (T4) CMIA | 7.5 | µg/dL | 4.87 - 11.72 |
| Thyroid Stimulating Hormone (Ultrasensitive) CMIA | 2.6 | µIU/mL | 0.35 - 4.94 |

Interpretation:

| Pregnancy | Reference ranges TSH |
|----------------|----------------------|
| 1 st Trimester | 0.1 - 2.5 |
| 2 ed Trimester | 0.2 - 3.0 |
| 3 rd Trimester | 0.3 - 3.0 |

Primary malfunction of the thyroid gland may result in excessive (hyper) or below normal (hypo) release of T3 or T4. In addition as TSH directly affects thyroid function, malfunction of the pituitary or the hypo - thalamus influences the thyroid gland activity. Disease in any portion of the thyroid-pituitary-hypothalamic system may influence the levels of T3 and T4 in the blood. In primary hypothyroidism, TSH levels are significantly elevated, while in secondary and tertiary hypothyroidism, TSH levels may be low. In addition, in the Euthyroid Sick Syndrome, multiple alterations in serum thyroid function test findings have been recognized in patients with a wide variety of non-thyroidal illnesses (NTI) without evidence of preexisting thyroid or hypothalamic-pituitary diseases. Thyroid Binding Globulin (TBG) concentrations remain relatively constant in healthy individuals. However, pregnancy, excess estrogen's, androgen's, antibiotic steroids and glucocorticoids are known to alter TBG levels and may cause false thyroid values for Total T3 and T4 tests.

| TSH | T4 | T3 | INTERPRETATION |
|--------|----------------|----------------|---|
| High | Normal | Normal | Mild (subclinical) hypothyroidism |
| High | Low | Low or normal | Hypothyroidism |
| Low | Normal | Normal | Mild (subclinical) hyperthyroidism |
| Low | High or normal | High or normal | Hyperthyroidism |
| Low | Low or normal | Low or normal | Nonthyroidal illness; pituitary (secondary) hypothyroidism |
| Normal | High | High | Thyroid hormone resistance syndrome (a mutation in the thyroid hormone receptor decreases thyroid hormone function) |

Covid-19 IgG Antibody

| | | | |
|--|------|-------|----------------------------------|
| SARS- CoV-2 spike protein S1 & S2 IgG <i>CMIA</i> | 13.9 | AU/mL | <50.0 Negative >50.0 Positive |
|--|------|-------|----------------------------------|

Interpretation:

| AU/mL | Results | Retest rules and interpretation |
|----------------------|-----------|---|
| < 12.0 | Negative | A negative result may indicate the absence or a very low level of IgG antibodies to the pathogen. The test could score negative in infected patients during the incubation period and in the early stages of infection. |
| >= 12.0 to < 15.0 | Equivocal | A second sample should be collected and tested one to two weeks later |
| ≥ 15.0 | Positive | A positive result generally indicates exposure of the subject to the SARS-COV-2 and /or seroconversion post- Vaccination |

Disclaimer:

1. Results should be used in conjunction with other data; e.g., symptoms, results of other tests, and clinical impressions.
- 2.If the quantity of antibodies is below the detection limit of the assay or if the virus has undergone amino acid mutation(S) in the epitope recognized by the test, Negative results can occur.
- 3.For equivocal results, kindly repeat in a fresh sample after 14 days.

Please Note :
Test results vary with different methodologies S/E equipments and should therefore be compared only with results from the same methodologies / equipments

| Cast | Absent | - | Absent |
| Yeast Cells | Absent | - | Absent |
| Amorphous deposits | Absent | - | Absent |
| Bacteria | Absent | - | Absent |
| Protozoa | Absent | - | Absent |

Interpretation:

URINALYSIS- Routine urine analysis assists in screening and diagnosis of various metabolic, urological, kidney and liver disorders.

Protein: Elevated proteins can be an early sign of kidney disease. Urinary protein excretion can also be temporarily elevated by strenuous exercise, orthostatic proteinuria, dehydration, urinary tract infections and acute illness with fever

| Test Description | Value(s) | Unit(s) | Reference Range |
|---|----------|---------|-----------------|
| <p>Glucose: Uncontrolled diabetes mellitus can lead to presence of glucose in urine. Other causes include pregnancy, hormonal disturbances, liver disease and certain medications.</p> <p>Ketones: Uncontrolled diabetes mellitus can lead to presence of ketones in urine. Ketones can also be seen in starvation, frequent vomiting, pregnancy and strenuous exercise.</p> <p>Blood: Occult blood can occur in urine as intact erythrocytes or haemoglobin, which can occur in various urological, nephrological and bleeding disorders.</p> <p>Leukocytes: An increase in leukocytes is an indication of inflammation in urinary tract or kidneys. Most common cause is bacterial urinary tract infection.</p> <p>Nitrite: Many bacteria give positive results when their number is high. Nitrite concentration during infection increases with length of time the urine specimen is retained in bladder prior to collection.</p> <p>pH: The kidneys play an important role in maintaining acid base balance of the body. Conditions of the body producing acidosis/ alkalosis or ingestion of certain type of food can affect the pH of urine.</p> <p>Specific gravity: Specific gravity gives an indication of how concentrated the urine is. Increased specific gravity is seen in conditions like dehydration, glycosuria and proteinuria while decreased specific gravity is seen in excessive fluid intake, renal failure and diabetes insipidus.</p> <p>Bilirubin: In certain liver diseases such as biliary obstruction or hepatitis, bilirubin gets excreted in urine.</p> <p>Urobilinogen: Positive results are seen in liver diseases like hepatitis and cirrhosis and in cases of haemolytic anaemia.</p> | | | |

Terms and Conditions of Reporting

1. The presented findings in the Reports are intended solely for informational and interpretational purposes by the referring physician or other qualified medical professionals possessing a comprehensive understanding of reporting units, reference ranges, and technological limitations. The laboratory shall not be held liable for any interpretation or misinterpretation of the results, nor for any consequential or incidental damages arising from such interpretation.
2. It is to be presumed that the tests performed pertain to the specimen/sample attributed to the Customer's name or identification. It is presumed that the verification particulars have been cleared out by the customer or his/her representation at the point of generation of said specimen / sample. It is hereby clarified that the reports furnished are restricted solely to the given specimen only.
3. It is to be noted that variations in results may occur between different laboratories and over time, even for the same parameter for the same Customer. The assays are performed and conducted in accordance with standard procedures, and the reported outcomes are contingent on the specific individual assay methods and equipment(s) used, as well as the quality of the received specimen.
4. This report shall not be deemed valid or admissible for any medico-legal purposes.
5. The Customers assume full responsibility for apprising the Company of any factors that may impact the test finding. These factors, among others, includes dietary intake, alcohol, or medication / drug(s) consumption, or fasting. This list of factors is only representative and not exhaustive.

DISCLAIMER

This is a sample report provided for demonstration purposes only and does not represent an actual patient report. Test results, reference ranges, methodologies, instrumentation, and report formats may vary depending on the laboratory performing the test. The format and representation shown are indicative of reports generated by the National Reference Laboratory of Redcliffe Labs, Noida. This sample report should not be used for medical interpretation, diagnosis, or treatment decisions.

Health Advisory

● Normal (N)
 ● Low (L)
 ● Borderline (BL)
 ● High (H)

Anemia Profile

Anemia is the condition where your body has less RBCs (red blood cells) or the RBCs don't have enough haemoglobin. Haemoglobin is the protein present in RBCs that help carry oxygen to your body's tissues.

Hemoglobin: 10.8 g/dL

● LOW

Abnormal results may indicate :

Anemia.

Diet and Lifestyle Tips :

Eat iron rich foods as iron is essential for the production of hemoglobin. Iron-rich foods include meat, fish, eggs and oysters, beans, lentils, dark green leafy vegetables (spinach, watercress, curly kale), broccoli, iron fortified cereals and dried fruits (apricots, prunes and raisins).

Avoid drinking tea and coffee with meals, and foods with high phytic acid, such as whole grain cereals, as they can affect digestive absorption of iron from your diet.

Your body absorbs iron from plant-based foods better when you eat them with vitamin-C rich foods, such as oranges, strawberries, melons, peppers and tomatoes.

Diabetes

This panel is used to check how much glucose/sugar there is in your blood. Too much blood glucose might indicate diabetes.

HbA1c (Glycosylated Haemoglobin): 5.7%

● BORDERLINE

HbA1c is your average blood glucose (sugar) levels for the past three months.

One of the ways to control and reduce your HbA1c level - is to change your diet. Generally, foods that are high in carbs increase your blood sugar significantly. Also, foods that are high in fiber keep your glucose level in check.

Additionally, keeping your portion sizes *small* could prevent sharp rises in your blood sugar.

Some high-Carb foods to avoid

WHITE BREAD

POTATOES

Some high-Fiber foods to choose from

APPLES

CABBAGE

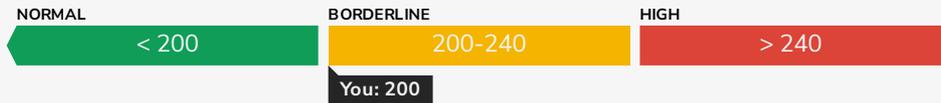

Lipid Profile

A panel of tests that measures the amount of fat or lipid in your blood.

Total Cholesterol: 200 mg/dL

● BORDERLINE

Did You Know?

Cholesterol in your body is mainly produced by your liver, but you can also consume it by eating foods that come from animals, such as egg yolks, meat, and cheese.

Consumption of high saturated fats (such as palm oil and coconut oil) and trans fats cause your liver to make more cholesterol than it would otherwise.

A person can get a heart attack when blood flow to his heart is blocked (due to obstruction of his blood vessels).

DISCLAIMER

This is a sample report provided for demonstration purposes only and does not represent an actual patient report. Test results, reference ranges, methodologies, instrumentation, and report formats may vary depending on the laboratory performing the test. The format and representation shown are indicative of reports generated by the National Reference Laboratory of Redcliffe Labs, Noida. This sample report should not be used for medical interpretation, diagnosis, or treatment decisions.
